Then select a client or create a new one and press

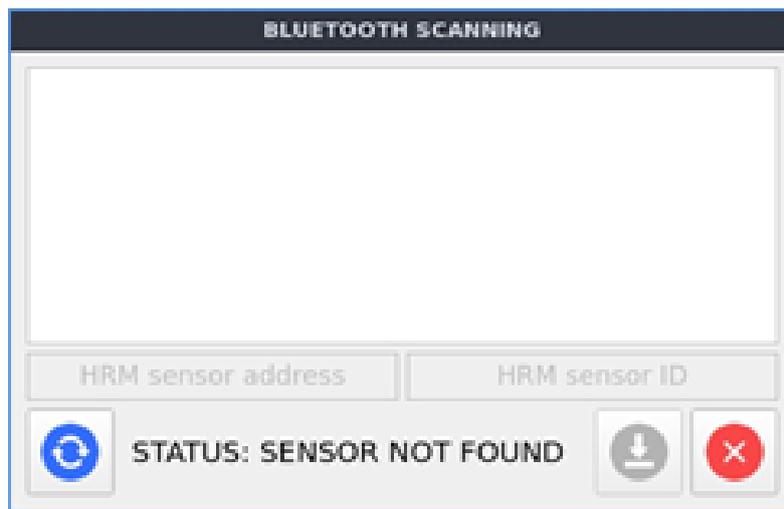

For the first time the sensor has to be paired with the device. Scanning takes several seconds.

The found sensor has to be saved by pressing the SAVE button.

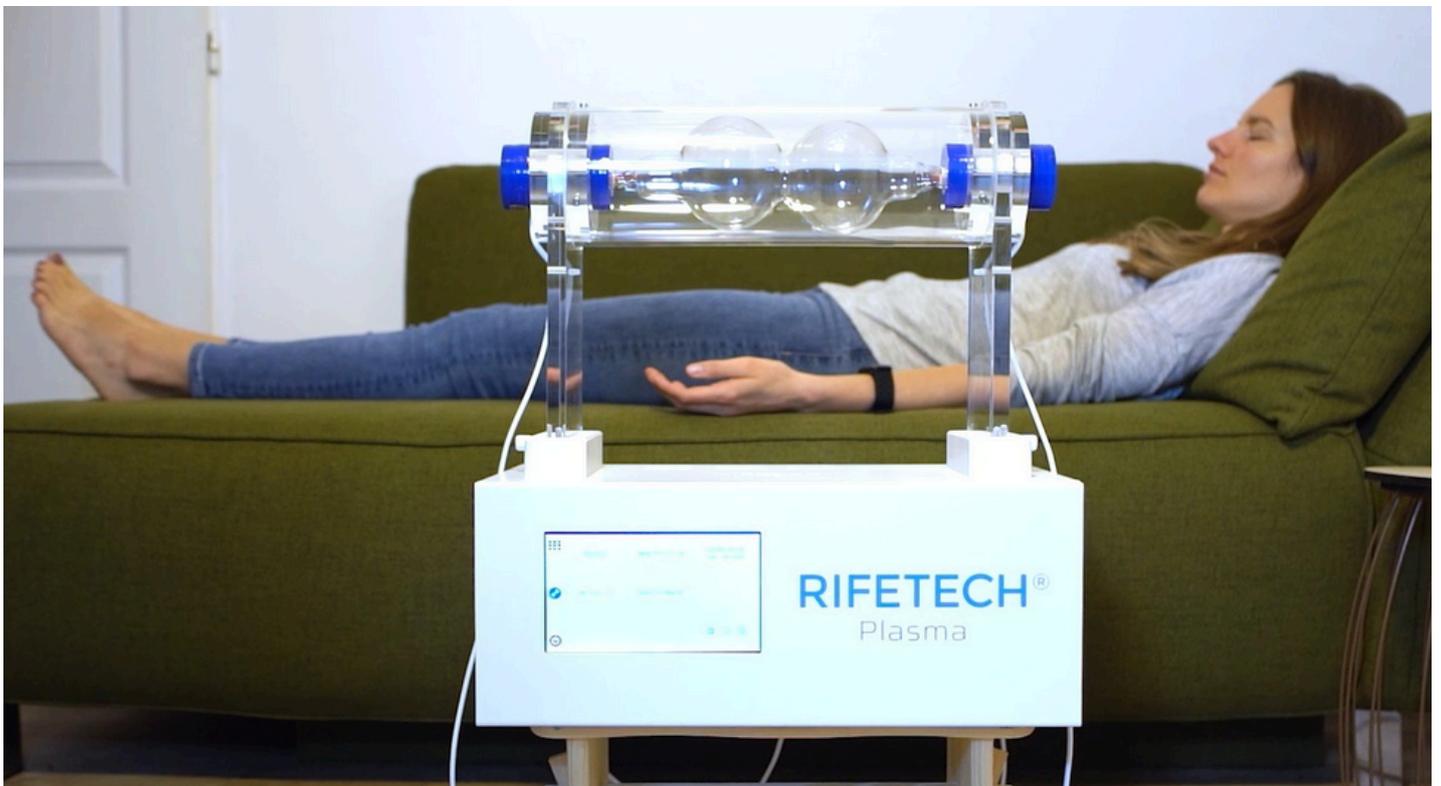

If the sensor wasn't detected, check whether it is activated and properly put on your forearm. Then press REFRESH  to scan again.

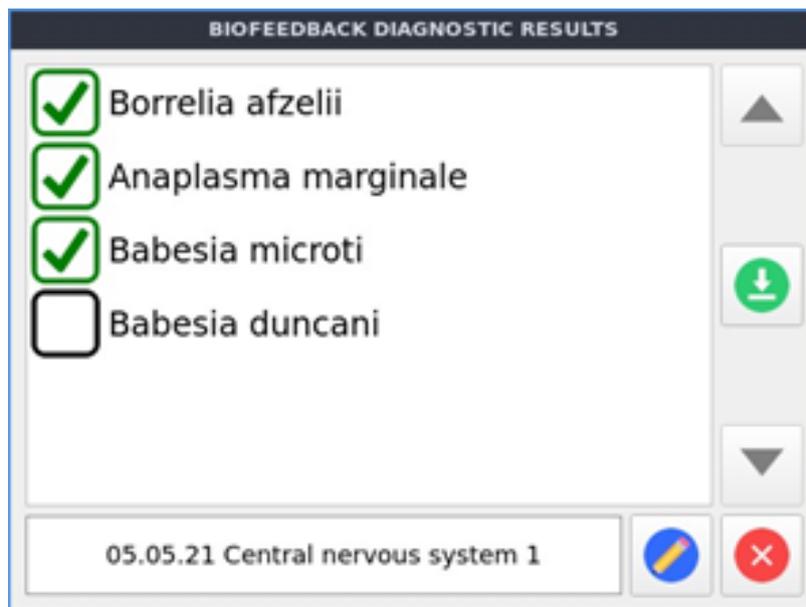

Now sit comfortably approximately 0,5 meter far from the device and start biofeedback by pressing the  icon.

Biofeedback takes approx. 6-10 minutes. It is important to keep calm and not to move during scanning.

When scanning is complete a list of recorded pathogens will be displayed in descending order of response intensity. The three strongest “hits” are automatically checked, however, it is possible to manually check weaker “hits” as well. Checked pathogens will be saved by pressing the SAVE button . The therapeutic batch will be added into the list of therapeutic batches of the client.
